DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8, 17, 22-23, 33, 34 and 35, drawn to an apparatus or method for generating a synchronization signal, classified in class 358, subclass 1.5.
 - II. Claims 9-16, 25-32, 36 and 37, drawn to an apparatus and method of forming an image, classified in class 358, subclass 1.1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as means for or steps of outputting a first selection signal, outputting a second selection signal, synthesizing the first and second signal. Subcombination II has separate utility such as means for or steps of front-end synchronization detecting, rear-end synchronization detecting, main-scanning magnification correcting, expansion and contraction correcting, color offset correcting, See MPEP § 806.05(d).
3. The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional

application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.
